Xiong Ding

PH.D. STUDENT · PHYSICS RESEARCHER

School of Physics, Georgia Institute of Technology, 837 State Street, Atlanta, Georgia 30332-0430 USA

(+1) 678-882-9228 | xding@gatech.edu | www.cns.gatech.edu/∼xiong/ | github.com/dingxiong | www.linkedin.com/in/xiong-ding

Education

Georgia Institute of Technology — *Atlanta, GA, USA*

Ph.D. in Physics — *Aug. 2012 – Jun 2017*

- adviser: Prof. Predrag Cvitanović
- Research area : nonlinear dynamics, cycle expansion theory, bifurcation theory, complex Ginzburg-Landau equation

Georgia Institute of Technology — *Atlanta, GA, USA*

M.S. in Computer Science & Engineering — *Jan.2016 – Jun. 2016*

- Interested area : High Performance Computing(**HPC**), Machine Learning (**ML**)
- GPA: 3.86/4.0

Skills

Programming : **Proficient :** C/C++, Python, Matlab; **Familiar :** Java, Fortran

Tools : Bash, Perl, Unix: Sed & Awk, Latex, Emacs

Libraries : CUDA, Cilk, Boost.Python, Eigen, LAPACK, ARPACK, OpenMP, OpenMPI, FFTW, HDF5, Plotly

Web : Django with Python, CSS, HTML

Professional Experience

Online course : Geometry of chaos — *www.chaosbook.org/course1*

Role : Web developer & Teaching Assistant — *2015 Spring*

- **Achievement :** Design and implement online autograder & Design Homework for 16 weeks.
- **Core features:** Auto grade studensts' online submissions & Email back grades automatically & Provide a straightforward interface for the customer (the course instructor) to view the grades online.
- **Framework :** Django in Python, deployed in Heroku **Repository :** https://github.com/dingxiong/phys7224

Center for Nonlinear Science, Georgia Institute of Technology — *Atlanta, GA, USA*

Role : Research Assistant Adviser : Prof. Predrag Cvitanović

Research topic : *Computation of Floquet vectors in Kuramoto-Sivashinsky system* — *2013 – 2014*

- **Main result:** The Floquet multipliers of Periodic orbits in high dimensional system usually spans a large orders of magnitudes. The periodic eigendecomposition is the right tool to obtain Floquet spectrum and vectors to high accuracy. See paper[2] for more detail.

Research topic : *Investigation of the local dimension of inertial manifolds in chaotic systems* — *2014 – 2015*

- **Main result:** By studying the shadowing cases of periodic orbits in Kuramoto-Sivashinsky system, we show strong evidence that the inertial manifold has dimension 8. see paper [1] for more details.

Research topic : *Symbolic dynamics in symmetry reduced 1-d Kuramoto-Sivashinsky system* — *2015 – Present*

- In the symmetry reduced state space, the attractor of 1-d Kuramoto-Sivashinsky system is low dimensional. By constructing appropriate Poincaré section, we propose to obtain the symbolic dynamics.

School of Mathematics, Georgia Tech — *Atlanta, GA, USA*

Role : Cooperation with Prof. Sung Ha Kang from Math department

Research topic : *Integration of soliton explosion with local error control in cubic quintic Ginzburg-Landau system* — *Sprint 2016*

- **Main result:** Study the performance of exponential integrator in Ginzburg-Landau system, and add time step control into a few popular exponential integrators. See paper [3].

Selected CS Course Projects

Course project: Gatech CS6491 Computer Graphics

Atlanta, GA, USA

Project : Triangular Mesh *Fall 2015*

- **Achievement :** Represent a triangular mesh by **CSX** table & Implement navigating methods on the mesh, such as swing, opposite, left, right and so on & Solve 4 interesting problems: **geodesic path**, **Gaussian decay swirl**, **lasso deletion** and **mesh cut**.
- **Toolbox :** Processing **Repository :** https://github.com/dingxiong/triangularMesh **Demo :** https://youtu.be/mWe0YO1bbZ4

Course project: Gatech CS6210 Advanced Operating System

Atlanta, GA, USA

Project : RPC-Based Proxy Server *Spring 2015*

- **Achievement:** Build a proxy server by remote procedure call(**RPC**) & test the performance of four different cache polices : no cache, Least Recent Used (LUR), random, and First in First out (FIFO). & RPC framework is provided by **Apache Thrift** library.
- **Language :** C++ **Repository :** https://github.com/dingxiong/CS6210Project3

Course project: Gatech CS6290 High Performance Computer Architecture

Atlanta, GA, USA

Project : Cache Design for Four Different Traces *Summer 2014*

- **Achievement :** Design and implement a parametric cache simulator & Design data caches well suited to the SPEC benchmarks. & Optimize cache with respect to variables including 2^C bytes of cache size, 2^S blocks with each block 2^{C-S} bytes, storage policies (ST) and replacement policies (R).
- **Language :** C++ **Repository :** https://github.com/dingxiong/cacheDesign

Course project: Gatech CSE6230 High Performance Computing : Tools and Applications

Atlanta, GA, USA

Project : CPU and GPU optimization in finding initial condition for Kuramoto Sivashinsky equation *Fall 2013*

- **main goal :** CPU and GPU optimization is deployed to find relative good initial conditions for Kuramoto-Sivashinsky equation.
- **Achievement:** Our result shows that the **icc & Cilk** approach has the best performance of all multi CPU implementation, and the GPU implementation has better performance if register usage is considered.
- **Language :** C **Tools :** gcc, icc, OpenMP, Cilk, CUDA, SIMD(SSE2, SSE4)
- **Repository :** https://bitbucket.org/dingxiong/project

Conferences & Talks

SIAM Conference on Application of Dynamical Systems

Snowbird, Utah, USA

Talk : Periodic Eigendecomposition and Its Application in Nonlinear Dynamics *May 2015*

- Coauthor: Prof. P. Cvitanović

Dynamics Days US

Atlanta, GA, USA

Poster : Lyapunov exponents, Floquet exponents and covariant vectors in Kuramoto-Sivashinsky equation *Jan. 2014*

- Coauthor: Prof. P. Cvitanović
