

# Xiong Ding

PH.D. STUDENT · PHYSICS RESEARCHER

Georgia Institute of Technology, 837 State Street, Atlanta, Georgia 30332-0430 USA

☎ (+1) 678-882-9228 | ✉ xding@gatech.edu | 🏠 www.cns.gatech.edu/~xiong/ | 🐙 github.com/dingxiong | 🔗 www.linkedin.com/in/xiong-ding

## Education

- Ph.D. in Physics** Georgia Institute of Technology Atlanta, GA, USA Aug. 2012 – Jun 2017
- adviser: Prof. Predrag Cvitanović
  - Research area : nonlinear dynamics, cycle expansion theory, bifurcation theory, complex Ginzburg-Landau equation
- M.S. in Computer Science & Engineering** Georgia Institute of Technology Atlanta, GA, USA Jan. 2016 – Jun. 2016
- Interested area : High Performance Computing(HPC), Machine Learning (ML)
  - GPA: 3.86/4.0

## Skills

**Programming :** **Proficient :** C/C++, Python, Matlab; **Familiar :** Java, Fortran  
**Tools :** Bash, Perl, Unix: Sed & Awk, Latex, Emacs  
**Libraries :** CUDA, Cilk, Boost.Python, Eigen, LAPACK, ARPACK, OpenMP, OpenMPI, FFTW, HDF5, Ploty  
**Web :** Django with Python, CSS, HTML

## Professional Experience

Online course : Geometry of chaos

[www.chaosbook.org/course1](http://www.chaosbook.org/course1)

Role : Web developer & Teaching Assistant

2015 Spring

- **Achievement :** Design and implement online autograder & Design Homework for 16 weeks.
- **Core features:** Auto grade students' online submissions & Email back grades automatically & Provide a straightforward interface for the customer (the course instructor) to view the grades online.
- **Framework :** Django in Python, deployed in Heroku **Repository :** <https://github.com/dingxiong/phys7224>

Center for Nonlinear Science, Georgia Institute of Technology

Atlanta, GA, USA

Role : Research Assistant Adviser : Prof. Predrag Cvitanović

**Research topic :** *Computation of Floquet vectors in Kuramoto-Sivashinsky system*

2013 – 2014

- **Main result:** The Floquet multipliers of Periodic orbits in high dimensional system usually spans a large orders of magnitudes. The periodic eigendecomposition is the right tool to obtain Floquet spectrum and vectors to high accuracy. See paper[2] for more detail.

**Research topic :** *Investigation of the local dimension of inertial manifolds in chaotic systems*

2014 – 2015

- **Main result:** By studying the shadowing cases of periodic orbits in Kuramoto-Sivashinsky system, we show strong evidence that the inertial manifold has dimension 8. see paper [1] for more details.

**Research topic :** *Symbolic dynamics in symmetry reduced 1-d Kuramoto-Sivashinsky system*

2015 – Present

- In the symmetry reduced state space, the attractor of 1-d Kuramoto-Sivashinsky system is low dimensional. By constructing appropriate Poincaré section, we propose to obtain the symbolic dynamics.

School of Mathematics, Georgia Tech

Atlanta, GA, USA

Role : Cooperation with Prof. Sung Ha Kang from Math department

**Research topic :** *Integration of soliton explosion with local error control in cubic quintic Ginzburg-Landau*

Sprint 2016

system

- **Main result:** Study the performance of exponential integrator in Ginzburg-Landau system, and add time step control into a few popular exponential integrators. See paper [3].

## Selected CS Projects

**Project :** Triangular Mesh

Gatech CS6491 Computer Graphics

Fall 2015

- **Achievement :** Represent a triangular mesh by **CSX** table & Implement navigating methods on the mesh, such as swing, opposite, left, right and so on & Solve 4 interesting problems: **geodesic path**, **Gaussian decay swirl**, **lasso deletion** and **mesh cut**.
- **Toolbox :** Processing **Repository :** <https://github.com/dingxiong/triangularMesh>
- **Demo :** <https://youtu.be/mWe0YO1bbZ4>

**Project :** RPC-Based Proxy Server

Gatech CS6210 Advanced Operating System

Spring 2015

- **Achievement:** Build a proxy server by remote procedure call(RPC) & test the performance of four different cache policies : no cache, Least Recent Used (LUR), random, and First in First out (FIFO). & RPC framework is provided by **Apache Thrift** library.
- **Language :** C++ **Repository :** <https://github.com/dingxiong/CS6210Project3>

**Project :** Cache Design for Four Different Traces

Gatech CS6290 High Performance Computer Architecture Summer 2014

- **Achievement :** Design and implement a parametric cache simulator & Design data caches well suited to the SPEC benchmarks. & Optimize cache with respect to variables including  $2^C$  bytes of cache size,  $2^S$  blocks with each block  $2^{C-S}$  bytes, storage policies (ST) and replacement policies (R).
- **Language :** C++ **Repository :** <https://github.com/dingxiong/cacheDesign>

**Project :** CPU and GPU optimization in finding initial condition for Kuramoto Sivashinsky equation *Gatech CSE6230 High Performance Computing : Tools and Applications* Fall 2013

- **main goal :** CPU and GPU optimization is deployed to find relative good initial conditions for Kuramoto-Sivashinsky equation.
- **Achievement:** Our result shows that the **icc & Cilk** approach has the best performance of all multi CPU implementation, and the GPU implementation has better performance if register usage is consideblack.
- Language : C    Tools : gcc, icc, OpenMP, Cilk, CUDA, SIMD(SSE2, SSE4)
- Repository : <https://bitbucket.org/dingxiong/project>

## Conferences & Talks

---

**SIAM Conference on Application of Dynamical Systems** *Snowbird, Utah, USA*

**Talk :** Periodic Eigendecomposition and Its Application in Nonlinear Dynamics *May 2015*

- Coauthor: Prof. P. Cvitanović

**Dynamics Days US** *Atlanta, GA, USA*

**Poster :** Lyapunov exponents, Floquet exponents and covariant vectors in Kuramoto-Sivashinsky equation *Jan. 2014*

- Coauthor: Prof. P. Cvitanović
